

Air Sanitization: new partnership between Roccheggiani S.p.A. and AM Technology for the release of innovative and advanced technologies

Roccheggiani, leading AHU manufacturer and AM Technology, a company with consolidated know-how for air sanitization technologies, sign an exclusive agreement for creating the new Steri-Lite®.

The new Steri-Lite® system will find application in Roccheggiani air handling units, ensuring germicidal efficiency up to 99.9%. The antiviral, antimicrobial and airborne reduction effect of Steri-Lite® occurs thanks to:

- **disinfection** by photo-inactivation from hydroperoxide, hydroxide and superoxide ions generated by photocatalytic effect on structures painted with special Airlite® coating
- **sterilization** by ultra-high dose UV-C rays (5.000 to 20.000 µJ/cm²).

Steri-Lite® results from the key skills and knowledge on air quality developed by Roccheggiani and AM Technology in order to ensure the best levels of health and well-being in indoor environments.

Roccheggiani Steri-Lite® powered by Airlite®
